// MY EXPERIENCE

Chat app -real time listener: bit.ly/3VvD0t0

- This application was designed in raw HTML,CSS and Javascript code (no libraries) and applying Firebase database to create , store, delete with real time listener

Travel guides app : bit.ly/3OHnfwI

-This application using HTML, CSS, Firebase authentication, supports sign in, sign up and log out, can create guides or see guides from other if you have an account. It is really helpful to check before any trip.

E-commerce app: https://emart-react.vercel.app/

-This app is using React, React Redux. It is a e-commerce app about latest fashion, you can check the style, add to cart and also purchase products.

Save favourite youtube videos app : bit.ly/3iceUVz

-This application can help you storing list of favourites videos on Youtube just by simply adding a link, delete it or access it later, datas storing by local storage. Using HTML, CSS and Javascript.

Recipes app : bit.ly/3u4fsQ7

-A simple recipes app using fetch API to search recipes by keywords, add to list favourite recipes, allows you to access later by local storage. Using HTML, CSS and Javascript.

Post-UI : bit.ly/3VcPMNd

-This is based on a blog idea, which supports CRUD and calls API from the server.

Mini-games-app: bit.ly/3OOD0lK

-An app to help us relieve stress, by playing some old days games can help our brain distract and back to studying or working with an efficient same at beginning, no long-term game. You don't need to spend hours on a game. Just pure relax, test it out.

// EDUCATION

Self teaching Web development 2019 - present

FRONT END DEVELOPMENT

Open University, Ho Chi Minh City / 2010 -2015

BACHELOR OF CIVIL ENGINEERING

LINH NGUYEN

Front end Developer

// MORE ABOUT ME
// AND MY EDUCATION
// STORY

Hey there, I would like to tell you more about me. I am from Vietnam and currently live in Frankfurt am Main, Germany. I like travelling, coding, and cooking. On the first page, you already know I am a self-teaching Front end Developer with a background as a Civil engineer. Let me explain why I decided to switch my career, I did not know what I wanted to do with my life when I was 18 and needed to choose a major to study at University, I am always good with math and logic. My best friend chose to be a Civil Engineer and I thought It would be cool if we could study in the same class again, that is why I was studying to be a Civil engineer in the first place. I don't regret it, to be honest. It shaped me now and helped me a lot in life. It is time for me to do what I am truly passionate about, what I am enjoying doing, I guess. I started to learn about Web Development when my sister opened a coffee shop, we wanted to have a website where customers can check the price, see the menu and some contact for them to order delivery service. A very simple website with plain HTML, and CSS. I did make it work, we have more customers, and some of the shops nearby asked me to do it for them also. It is the beginning of my journey, I just want to know more, and be able to make better Websites, with functions and more...My biggest advance is I love learning and know how to learn, I don't want to sign up for another University to have a Computer Science degree, but I am following the same program that a student in Computer Science studies. Also, to be a civil engineer, I needed to learn about Math, Physics, Programming and Problem Solving... which are quite similar to some subjects in Computer Science. I think that on this path, knowing how to learn and enjoying learning new things is more important than having another degree. I don't have too much experience yet, but I have the right attitude and I believe I will be a good developer, maybe not yet, but I will be there soon. I hope that you can give me a chance to work at your company, and we both can benefit in the end. If you can not, it is fine, I have more time to learn. Thanks for reading until the end, see you around in the future.
